

ORGANIZATIONAL BEHAVIOUR

ORGANISATIONAL BEHAVIOUR...

INTRODUCTION:

- Traditionally, Psychologists, sociologists and Anthrppologists who are termed as behavioural scientists, have been analysing human behaviour in different settings.
- The concern for scientific study and analysis of human behaviour in organisations has been shaped into a discipline known as 'Organisational Behaviour.'
- It is a growing discipline with a high potential for influencing the way in which organisations are managed.

ORGANISATIONAL BEHAVIOUR...

- 'Organisational Behaviour' is interdisciplinary in nature because psychologists, sociologists, anthropologists, economists and other social scientists make important contribution for the enrichment of this discipline.

MEANING:

- Organisation is a group of people who work together to achieve a set of goals.
- Behaviour is the way of treating others.
- Organisational Behaviour is the study and application of knowledge about how people as individuals and as groups behave in organisations.

DEFINITION OF ORGANISATIONAL BEHAVIOUR...

- **Luthans** defined Organisation Behaviour as, “it is concerned with the understanding, prediction and control of human behaviour in organisation.”
- **John W. Newstrom and Keith Davis** define the term Organisational Behaviour as, “the study and application of knowledge about how people as individuals and as groups act within organisations. It strives to identify ways in which people can act more effectively.”

FEATURES OF ORGANISATIONAL BEHAVIOUR:

- After analysing a number of definitions, we come across the following points.
- **Organizational Behaviour refers to the study of behaviour.**
- *Human behaviour is caused by individuals, groups and structure of the organisation.*

For example,

The Tall Structure makes the individuals to be rule minded and behave mechanically.

The Flat Structure makes the individual to be innovative, creative, challenging and committed.

FEATURES OF ORGANISATIONAL BEHAVIOUR...

- Human behaviour can be studied, predicted and managed.
This can be done to some extent but not completely as required.
- Organisational Behaviour helps to understand the organisational strategies, type of human behaviour necessary for their implementation and manage the people to exert the behaviour necessary for strategy implementation to the maximum extent.*
- The purpose of Organisational Behaviour is to enhance organisational efficiency and effectiveness.*
- Organisational Behaviour is a multi-disciplinary subject, i.e. various disciplines contributed to Organisational Behaviour.*

IMPORTANCE OF ORGANISATIONAL BEHAVIOUR/ WHY STUDY ORGANISATIONAL BEHAVIOUR/ NEED FOR ORGANISATIONAL BEHAVIOUR:

The major benefits of studying Organisational Behaviour are as follows:

- 1) Organisational Behaviour helps us to understand ourselves and others in a better way.**
 - This helps greatly in improving our interpersonal relations in the organisation.
 - Friendly and cordial relations between employees and management and also among the employees create a congenial work environment in organisation.

WHY STUDY ORGANISATIONAL BEHAVIOUR...

- Understanding of topics like attitude, perception, communication, conflict will change the very style of talking and functioning of an individual.

2) The knowledge of organisational behaviour helps manager to know individual employees better and motivate them to work for better results.

- A manager in a business establishment is concerned with get the work done through delegation.
- He will be successful when he can motivate subordinates to work for better results.

WHY STUDY ORGANISATIONAL BEHAVIOUR...

3) Organizational Behaviour tackles human problems humanly.

- It helps to understand the causes of the problem, predicts its future course of action and control its evil consequences.
- It is helpful in maintaining cordial individual relations.
- If an employee is slow in his work or his productivity is steadily declining, it is not always because of denial of promotion or a poor work environment, often the attitude of the boss makes the worker lazy.

WHY STUDY ORGANISATIONAL BEHAVIOUR...

- *Similarly, if the union of workers gives a strike call, the basic issue may not be a demand for more wages, higher bonus, a better canteen.*
- *It is the reluctance of the management to talk to union leaders about issues might provoke them to give a strike call.*
- *Relation between employees and management is often strained for reasons which are personal issues, not ethical.*

WHY STUDY ORGANISATIONAL BEHAVIOUR...

- 4) The most popular reason for studying Organisational Behaviour is to learn how to predict human behaviour and then apply it in some useful way to make the organisation more effective.
- 5) Organisations are run by men and men working in the organisations make all the difference.
 - The effective utilisation of people working in the organisation guarantee success of the organisation.
 - Organisational Behaviour helps managers how to manage human resources efficiently in the organisation.
 - It helps in inspiring and motivating employees towards higher productivity and better results.

WHY STUDY ORGANISATIONAL BEHAVIOUR...

- 6) Organisation Behaviour theories and concepts help us to influence organisational events.
 - It helps to communicate effectively with others, manage conflicts, make better decisions and many more.
- 7) Organisational Behaviour helps us to predict what people will do under various conditions.
- 8) Organisational Behaviour provides a road map to our lives in the organisation.
- 9) Organizational Behaviour uses scientific research to help us understand and predict organisational life.

SCOPE OF ORGANISATIONAL BEHAVIOUR:

- Organisational Behaviour is the study of human behaviour at work in organisation.
- Accordingly, the scope of Organisational Behaviour includes the study of individuals, group and organisation/structure.

i) **INDIVIDUALS:**

- Individuals differ in many respects. The study of individuals therefore, includes aspects such as personality, learning, perception, motivation, attitudes, values and job satisfaction.

SCOPE OF ORGANISATIONAL BEHAVIOUR..

ii) **GROUPS:**

- The study of groups includes group dynamics, group conflicts, communication, leadership, power and politics and the like.

iii) **ORGANISATION/STRUCTURE:**

- The study of organisation includes aspects like formation of organisational structure, organisational culture, organisational change and development, Human Resource Management, etc.
 - In a nutshell, Organisational Behaviour studies how organisation influences people or how people influence organisation.
-

ORGANISATIONAL BEHAVIOUR MODEL...

INDIVIDUAL BEHAVIOUR:

- Individual Behaviour includes personality, perception, Learning, Attitude and motivation.

GROUP BEHAVIOUR:

- Group Behaviour includes communication, Group dynamics, Leadership, inter group.

ORGANISATIONAL BEHAVIOUR:

- Organisational Behaviour includes organisational culture, Human Resource Politic, and practices, workstress, Organisational change and development.

ORGANISATIONAL BEHAVIOUR MODEL...

- There are generally four Organisational Behaviour models which are briefly described as follows:

i) AUTOCRATIC MODEL

ii) CUSTODIAL MODEL

iii) SUPPORTIVE MODEL

iv) COLLEGIAL MODEL

I) AUTOCRATIC MODEL:

- This model depends on power of the boss. It indicates the total control of employees at work.
- An autocratic model has the following characteristics:
 - Managing the authority
 - Employees are obedient
 - employees depend upon the boss
 - Employees give minimum performance.
 - Employees are paid minimum wages.

ORGANISATIONAL BEHAVIOUR MODEL...

II) CUSTODIAL MODEL:

- This model depends on economic resources.
 - This model has the following characteristics.
 - Manager should pay wages and benefits.
 - He has to fulfill the security needs of the employees.
 - Dependence of employees on the organisation, not on boss.
- Employees give passive co-operation.

ORGANISATIONAL BEHAVIOUR MODEL...

iii)SUPPORTIVE MODEL:

- This model depends upon leadership.
- A supportive model has the following characteristics.
 - Management has to support the job performance of the employees.
 - The employees feel a sense of participation and task involvement.
 - Employees need status and recognition.
 - Employees take steps to show their performance for fulfilling organizational and individual needs.

ORGANISATIONAL BEHAVIOUR MODEL...

iv) COLLEGIAL MODEL:

- This model depends upon management's building a feeling of partnership with employees.
- This model has the following characteristics:
 - Managers are contributors rather than bosses.
 - Employees are self disciplined.
 - Employees need self actualization.
 - Employees is given on team work.
- Sometime a persistent question comes to our mind that which model is the best one?
- The answer is not specific model.

ORGANIZATIONAL BEHAVIOUR MODEL...

- That means no particular model is best suited to all conditions.
- The manager has to decide according to the policies, culture and environment of organisation.
- However, both supportive Model and Collegial Model are used relatively more than the other two models, i. e., Autocratic model and custodial Model.

NEW CHALLENGES OF OB:

- I) WORK-FORCE DIVERSITY
- II) IMPROVING QUALITY AND PRODUCTIVITY
- III) RESPONDING TO LABOUR SHORTAGE
- IV) CHANGING EMPLOYEE EXPECTATIONS
- V) GLOBALISATION
- VI) MANAGING CHANGE
- VII) ETHICS AND SOCIAL RESPONSIBILITY

NEW CHALLENGES OF OB...

I) **WORK-FORCE DIVERSITY:**

- The first and foremost problem faced by the manager in each and every organization is referred to work-force diversity.
- By workforce diversity, we mean that heterogeneity in character with the inclusion of workers from different groups such as man, woman, physically handicapped person, defence personnel, backward classes and ethnic group.
- It addresses difference among individuals.
- The ultimate way to solve this problem is to treat them equally and give all types of co-operation as and when required.
- The manager should not create any discrimination among the employees.

NEW CHALLENGES OF OB...

II) IMPROVING QUALITY AND PRODUCTIVITY:

- Another problem raised by the manager in the organisation is the quality improvement of the product.
- If the quality is not up to the customer's satisfaction, then it will remain unsold.
- As a result of which organisation may incur loss.
- This problem can be solved by following two principles, i.e.,
 - Total Quality Management (TQM)
 - Process Re-engineering

NEW CHALLENGES OF OB...

Total Quality Management (TQM):

- It refers to the constant focus on customer's satisfaction through the continuous improvement of the organizational process.
- This can be possible by the following steps:
 - Active leadership
 - Intense focus on customers

Process Re-engineering:

- It depicts radically thinking and redesigning the process by which the work can be performed and the value for the customer can be created.
- All such programmes require extensive employee involvement.
- Management Guru Tom Peters says "Almost all quality improvement comes via simplification of design, manufacturing, layout, processes, and procedures."

NEW CHALLENGES OF OB...

III) RESPONDING TO LABOUR SHORTAGE:

- Labour shortage is a major problem for each organisation.
- The labour shortage occurs on account of low wage rate, low pension facility, low social security measures, low job satisfaction and non-availability of other facilities.
- This above problem can be eradicated with special attention to:
 - Good wage rate
 - Sophisticated recruitment and Retention Strategies
 - Performance evaluation.

NEW CHALLENGES OF OB...

IV) **Changing Employee Expectations:**

- With the changes in workforce demographics, employee expectations and attitudes have also changed.
- Traditional allurements such as job-security, attractive remuneration, housing, and the like do not attract, retain or motivate today's workforce.
- Employees today demand empowerment and expect quality of status with the management.
- Previous notions on managerial authority are giving way to employee influence and involvement along with mechanisms for upward communication.

NEW CHALLENGES OF OB:

V) GLOBALISATION:

- Globalisation refers to the integration of domestic economy with rest of the world.
- In simple sense, it is internationalisation of trade.
- Growing internalisation has its impact on people management.
- The management has to cope with problems of unfamiliar laws, languages, practices, competitors, attitudes, management styles, work ethics and more.
- Personnel functions such as hiring, training, compensating, maintaining and the like must acquire a global perspective.

NEW CHALLENGES OF OB...

- To face this challenge, the management must be flexible and proactive.
- Attracting and retaining capable employees is a big challenge to organisational experts.

VI) **MANAGING CHANGE:**

- Nothing is permanent except change.
- In the contemporary environment, organisations must plan and implement change to survive and grow.
- As a result, demands and expectations placed on managers and their organisations are greater than ever before, as is the complexity of the environment within which they must operate.

NEW CHALLENGES OF OB:

- While in the past managers might have seen change as something that must be addressed periodically, it has now become a fact of every day life for every one in the business world.
- And human resources are keys to successful introduction of any change.
- The challenge before managers is to prepare organizational members for change.
- They must play the role of 'change agents' or 'facilitators of change' to improve organisational effectiveness.

NEW CHALLENGES OF OB...

- **VII) ETHICS AND SOCIAL RESPONSIBILITY:**
- Ethics denote the socially accepted beliefs about what is right and wrong or good and bad.
- Social responsibility is the organization's obligation to protect and contribute to interests of various stakeholders such as investors and owners, employees, customers, suppliers, government, society, etc.
- Various trade associations and chambers of commerce and industry have developed codes of ethics for their member-organizations to increase the credibility of business.

NEW CHALLENGES OF OB...

- From the point of view of social responsibility, increasing attention has been focused in the recent years on business obligation to help avoid pollution, and contribute to social causes.
 - However, clearly defining ethical behaviour and social responsibility is a great challenge.
 - Nevertheless it is expected of managers to create an ethically healthy climate for their subordinates where they can perform their duties efficiently and confront a minimal degree of ambiguity regarding what constitutes good and bad behaviour.
-

LEARNING

INTRODUCTION:

- Learning plays a vital role in the organisation.
- People learn not-only for getting information, but also for changing behaviour.
- So, learning helps to understand the behaviour of individual, group and organisation.
- Learning is a powerful incentive for many employees to stick to certain organisations.
- Many employees speak: “We stay here not very much for cheques, but we keep learning.”

INTRODUCTION...

- Learning has significant impact on individual behaviour as it influences abilities, role perceptions, and motivation.
- learning is also essential for knowledge management.
- Knowledge management enhances the capacity of the organisation to acquire, share, and utilise knowledge in ways that improve its survival and success.

MEANING OF LEARNING:

- Learning is a relatively permanent change in behaviour that occurs as a result of a person's interaction with the environment .
- Learning is the process by which data is collected for the purposes of applying appropriate actions at a subsequent time.
- Learning is the process of acquiring knowledge, attitudes, or skills from experience.

MEANING OF LEARNING...

- Thus, Learning involves a change, though not necessarily improvement in behaviour.
- Learning may be good or bad from organisation point of view.
- Change may be relatively permanent.
- Some form of experience is necessary for learning to occur.
- Most human behaviours are acquired through learning.
- Learning is the pre-requisite of any behaviour.

DEFINITION OF LEARNING:

- According to Stephen P. Robbins, “Learning is any relatively permanent change in behaviour that occurs as a result of experience.”
- According to Sanford, “Learning is a relatively enduring change in behaviour brought about as a consequence of experience.”
- It can be said that learning is a change in behaviour.

CHARACTERISTICS/ COMPONENTS / NATURE OF LEARNING:

- *From the analysis of above definitions, the following characteristics of learning have been obtained.*

i) Learning refers to change.

- The change may be good or bad.

ii) Learning refers to relatively permanent change.

- Any temporary change in behaviour does not constitute in the learning part.
- For example, the temporary change in behaviour on account of drug addiction or smoking cigarette for a short period of time does not constitute in the learning part because though there is a change in behaviour but is for a temporary period.

FEATURES OF LEARNING...

iii)It refers to experience.

- Learning indicates the change in behaviour which is generally repeated.
- That means the change in behaviour should occur as a result of experience and training which is normally repeated.

iv)It refers to reinforcement.

- The **practice** and **experience** must be given due emphasis for learning to occur.
- In other words, the practice must be given due emphasis in such a manner so that it has to be repeated.

FEATURES OF LEARNING...

v) Learning teaches adjustment.

The individual must learn to adjust himself to the changes that take place about him.

vi) Learning is a continuous process.

Learning affects all modes of behaviour and continues through out the life cycle.

vii) Learning can be transferred from one person to another.

Learning occurs through sharing experiences, beliefs, values, etc.

LEARNING - EXPLICIT & IMPLICIT KNOWLEDGE:

- When employees learn, they acquire both explicit and tacit knowledge.
- Explicit knowledge is organised and can be communicated from one person to another.
- The information a student receives in a class room is mainly an explicit knowledge because the teacher packages and consciously transfers it to the students.
- Explicit knowledge can be written down and given to others.

LEARNING - EXPLICIT & IMPLICIT KNOWLEDGE...

- Tacit knowledge is acquired through observation and direct experience.
- For instance, a truck driver does not learn how to operate the vehicle through lectures.
- He masters the necessary skills by watching the subtle details as others perform the tasks.
- Similarly, organisations acquire tacit knowledge when employees make experiment with new technologies or work on unique problems for clients.

LEARNING - EXPLICIT & IMPLICIT KNOWLEDGE...

- Majority of the people have tacit or implied knowledge.
- Tacit knowledge is the idea that one knows more than what he can tell.
- Tacit knowledge is rooted in our actions and ways of thinking.
- Tacit knowledge is not clearly understood for which it can not be communicated clearly.
- The knowledge and skills one wants to give others are not sufficiently expressed, so tacit knowledge can not be communicated through verbal messages.
- Since tacit knowledge is not documented, it is quickly lost when employees leave the organisation.

LEARNING - EXPLICIT & IMPLICIT KNOWLEDGE...

- Most knowledge in organisations is tacit and one of the challenges in knowledge management is to make implicit knowledge explicit so that it may be stored and shared more easily.

LEARNING PROCESS:

- Learning process involves the following phases which have been also depicted in the figure.

PHASE-I: ATTENTION

PHASE-II: EXPECTANCY

PHASE-III: RETRIEVAL OF RELEVANT INFORMATION FROM
WORKING MEMORY

PHASE-IV: SELECTIVE PERCEPTION

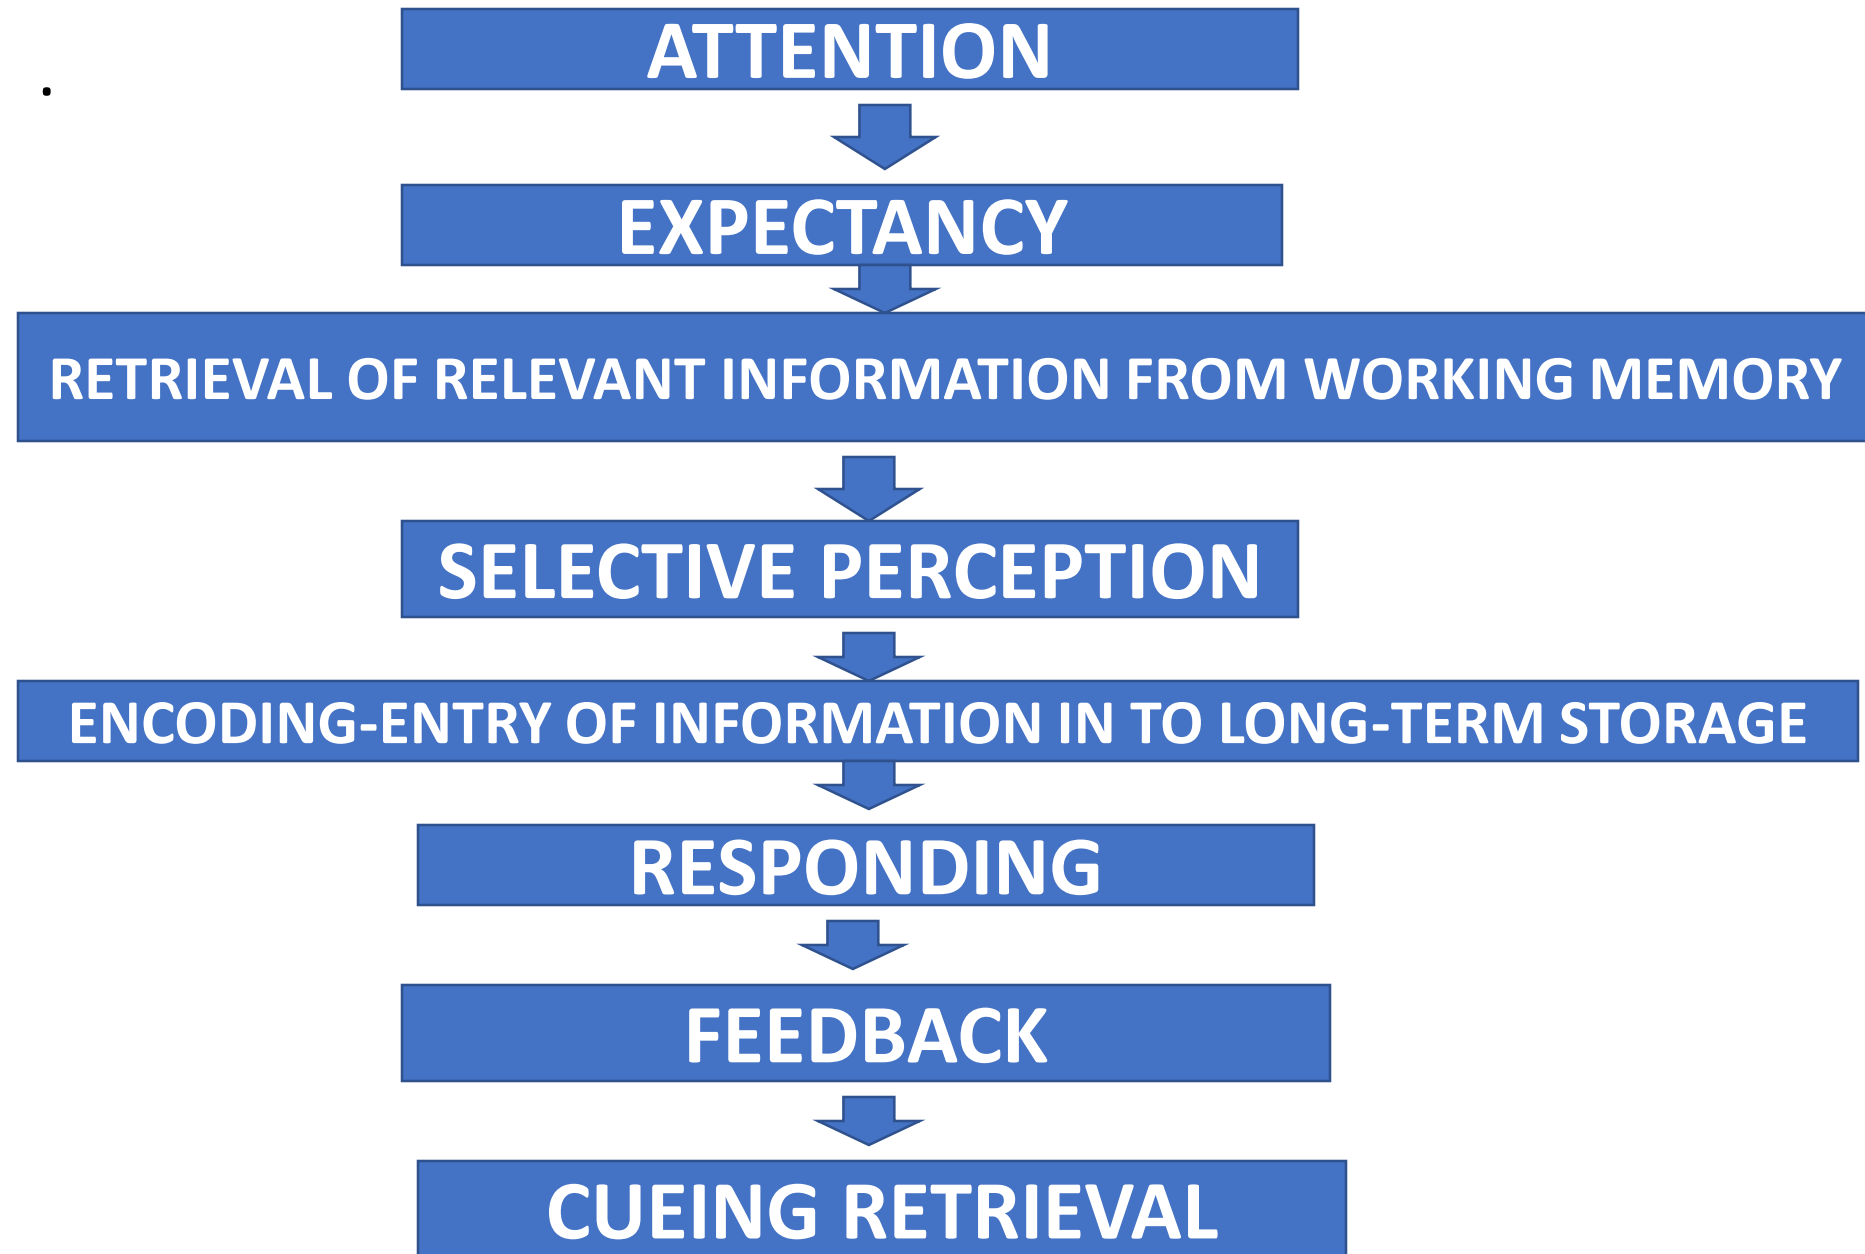

PHASE-V: ENCODING-ENTRY OF INFORMATION IN TO
LONG-TERM STORAGE

PHASE-VI :RESPONDING

PHASE-VII :FEEDBACK

PHASE-VIII :CUEING RETRIEVAL

FIGURE: LEARNING PROCESS

LEARNING PROCESS...

PHASE-I: ATTENTION:

- Learning is not likely to occur in the absence of attention.
- Attention is essential for getting information into the working memory and keeping it active there.
- Therefore, the first phase in the learning process is that the learner must focus attention on the learning activity.
- Although this is listed as the “first phase”, attention must be maintained throughout the other phases as well.

LEARNING PROCESS...

PHASE-II:EXPECTANCY:

- During this phase, the learner develops an expectancy that something desirable will happen as a result of the proposed learning process.
- The result is a motivation to engage in the subsequent phases of the learning process.

PHASE-III: RETRIEVAL OF RELEVANT INFORMATION FROM WORKING MEMORY:

- The learner retrieves from long-term memory, the structures that will be helpful in learning new information or solving problems that have been encountered.

LEARNING PROCESS...

PHASE-IV: SELECTIVE PERCEPTION:

- During this phase the learner focuses attention on the essential features of instructional presentation.
- It is not always possible for teachers to find out by simple inspection where students are focusing attention; and learners often fail to learn because they have focused on the wrong information.

LEARNING PROCESS...

- Failure at this selective perception can occur either because:
 - a. The presentation inadequately draws attention,
 - b. The learner fails to direct attention, or
 - c. A combination of both of these reasons.
- A frequent source of faulty selective perception is a fundamental misconception about the topic under consideration- the learner may think he is focusing on the correct information, when in reality this is a mistake.

LEARNING PROCESS...

PHASE-V: ENCODING - ENTRY OF INFORMATION IN TO LONG- TERM STORAGE:

- During this phase the learner encodes the information on which he has clearly focused attention – i.e., transfers the information into long-term memory by relating it to information that is already stored there.

PHASE-VI:RESPONDING:

- During this phase the learner gets back and actively uses the information that has been stored in long term memory.
- The learner demonstrates through an active performance that the learning has taken place.

LEARNING PROCESS...

PHASE-VII:FEEDBACK:

- During this phase the learner determines the degree to which the performance during the previous phase was satisfactory.
- When the feedback indicates acceptable performance, this usually serves as reinforcement to the learner.
- When this feed back shows that the learner's performance was imperfect, the learner looks back to an earlier phase of learning.
- For example, the learner may go back and seek appropriate pre-requisite knowledge and then continue again with the subsequent steps.
- The learner does not go beyond this step untill the information has been learned.

LEARNING PROCESS...

PHASE-VIII:CUEING RETRIEVAL:

- During this phase the learner practises recalling or applying the information after it has been initially learned in order to enhance retention of the information or to transfer the learning beyond its original context to a new application.

— — —

THEORIES OF LEARNING

‘or’

HOW LEARNING OCCURS?

- There are four theories of Learning which explain how learning occurs.
- These are:

1) Classical Conditioning Theory of Learning,

2) Operant Conditioning Theory of Learning,

3) Cognitive Theory of Learning and

4) Social Learning Theory.

THEORIES OF LEARNING...

1) CLASSICAL CONDITIONING THEORY OF LEARNING:

- The Classical Conditioning Theory of Learning is one of the outstanding creation of Nobel Prize-winning eminent Russian Psychologist, **Ivan Pavlov**.
- In this theory, Pavlov tried to explain the relationship between **Stimulus and Response**.
- Stimulus is defined as anything which is present in the environment and has a power to produce a response.
- For example, Fan, Light, Spectacles.
- This theory suggests that one situation can be substituted for another situation in order to produce a behaviour.

THEORIES OF LEARNING...

STATEMENT OF THE THEORY:

- The Classical Conditioning Theory States that the Conditioned Stimulus(CS) produces a Conditioned Response(CR).
- It is a type of conditioning in which an individual's response to stimuli which would not ordinarily produce such response.

THEORIES OF LEARNING...

EXPLANATION OF THE THEORY:

- The Classical Conditioning Theory has been explained by taking into account Stimulus and Response/Reflex by sighting the example of ringing of the bell, secretion of saliva from the mouth of the dog.
- A simple surgical procedure allowed Pavlov to measure accurately the amount of saliva secreted by the dog.
- When there was only bell without presentation of meat, there was no saliva from the mouth of the dog but when meat is presented followed by ringing of bell, there was secretion of saliva.

THEORIES OF LEARNING...

- This was repeated for a period of time in such a manner (first bell then meat) so that the dog becomes acquainted with ringing of the bell.
- After a while, when there was ringing of bell without presentation of meat, there was secretion of saliva.
- The above explanation has been categorised under three different situations by Pavlov.

BEFORE CONDITIONING:

Before conditioning, there was only bell which is known as Conditioned Stimulus (CS) there was no response (Saliva).

- When there was Presentation of meat (Unconditioned Stimulus - US), there was a response, i.e., Unconditioned Response (UR).

THEORIES OF LEARNING...

DURING CONDITIONING:

- In this case, when there was the repetition of ringing of the bell and presentation of meat, then there was secretion of Saliva (Unconditioned Response).
- Here, the dog becomes acquainted with ringing of the bell and presentation of meat in such a manner that the secretion of saliva (Unconditioned Response) is spontaneous.

THEORIES OF LEARNING...

AFTER CONDITIONING:

- After conditioning, when there was only ringing of the bell (Conditioned Stimulus, CS), there was secretion of saliva (Unconditioned Response, UR).
- Now, Salivation becomes Conditioned Response (CR) to Conditioned Stimulus (CS), i.e., Ringing of the bell.

THEORIES OF LEARNING...

This process is presented as follows:

Before Conditioning:

- (US)Unconditioned Stimulus(FOOD) (UR)Un Conditioned Response) (SALIVATLON) 

During Conditioning:

- (CS)Conditioned Stimulus(BELL) (US) Unconditioned Stimulus (FOOD) 
(UR) Unconditioned Response (SALIVATION) 

After Conditioning:

- (CS) Conditioned Stimulus (BELL) (CR) Conditioned Response (SALIVATION) 

THEORIES OF LEARNING...

RELEVANCE OF CLASSICAL CONDITIONING THEORY:

- Classical Conditioning Theory is very much applicable in organisational setting.
- It is best observed in the Police Department, particularly in police personnel regulating traffic in a city.
- Every circle is manned with inspectors, sub inspectors or constables to control movements of vehicles and pedestrians.
- During peak hours, an Asst. Commissioner of Police (ACP), who is in overall control of traffic, goes round the city and monitors the way the traffic is being regulated.

THEORIES OF LEARNING...

- It is the practice of the police personnel under the ACP to salute whenever he passes by in his vehicle.
- The police at the circles are so used to saluting their boss, that they do so even when only the vehicle passes without the ACP being seated inside.
- This theory does not have widespread applicability in the field of learning.

THEORIES OF LEARNING...

2) OPERANT CONDITIONING THEORY OF LEARNING:

- The second theory of learning is Operant Conditioning Theory of Learning.
- This theory has been formulated by other psychologists but credit goes to the Harvard psychologist **B.F Skinner** because he gave the concrete shape of this theory.
- Operant conditioning is also called as **Instrumental conditioning**.
- Operant conditioning refers to the process that our behaviour produces certain consequences and how we behave in the future will depend on what those consequences are.

THEORIES OF LEARNING...

- If our actions have pleasant effects, then we will be more likely to repeat them in future.
- If, however, our actions have unpleasant effects we are less likely to repeat them in future.
- Thus, according to this theory, behaviour is the function of its consequence.
- Operant conditioning emphasises voluntary behaviours.
- Researchers call them “operant behaviour” because they operate on the environment. Operant behaviour makes the environment respond in ways that we want.

THEORIES OF LEARNING...

- For example, a person inserts a coin in a coffee vending machine and presses a certain button so that the machine will offer a cup of coffee.
- The person learnt from past experience how to cause the environment (the machine) to deliver a cup of coffee.
- Examples of application of operant conditioning in organisational settings are many.
- A few more examples of operant conditioning behaviour are mentioned below:

THEORIES OF LEARNING...

OPERANT

BEHAVIOUR CONSEQUENCE

The individual

works

is paid

talks to other

meets more people

enters a restaurant obtains food

enters a library

finds book

increases productivity

receives merit pay

completes a difficult assignment

receives praise
& promotion.

- Operant conditioning has a much greater impact on human learning.
- It also explains much of organisational behaviour.

THEORIES OF LEARNING...

- For example, it is said that employees work eight hours a day, six days a week, in order to feed, clothe and shelter themselves and their families.
- Working is instrumental only in obtaining food, clothing and shelter.
- Some significant insights can be gained directly from this kind of analysis.
- The consequences of organisational behaviour can change the environmental situation and subsequently affect employee behaviours.
- Managers can analyse the consequences of organisational behaviour to accomplish the goals of production and control.

DIFFERENCE BETWEEN CLASSICAL CONDITIONING AND OPERANT CONDITIONING:

CLASSICAL CONDITIONING

Types of Response:

- i) In classical conditioning, a specific stimulus, such as food, is used to bring out a specific response.
- The response is brought out.
- Emphasis in classical conditioning is upon involuntary responses.

OPERANT CONDITIONING

- i) In operant conditioning, the response is not brought out by controlled stimulation but rather is spontaneously produced by the individual.
- Emphasis in operant conditioning is on voluntary response.

DIFFERENCE BETWEEN CLASSICAL CONDITIONING AND OPERANT CONDITIONING:

CLASSICAL CONDITIONING

- **Consequences of Response:**

ii) In classical conditioning, the organism's behaviour is not instrumental in achieving any such result, the organism is unable to change the events of the experiment by its behaviour.

Thus, food is presented or not presented in accordance with the design of the experiment- the subject's behaviour does not influence the occurrence of these events.

OPERANT CONDITIONING

ii) In operant conditioning, the individual responds to the environment to achieve some desirable result, such as, access to food or water, escape from pain or discomfort, or some other desirable things.

THEORIES OF LEARNING...

3)COGNITIVE THEORY OF LEARNING:

- Learning is a cognitive process.
- In the cognitive process people remain conscious and actively participate in the process of learning.
- Cognitive theory of learning assumes that the organism learns the meaning of various objects and events and responds depending on the meaning assigned to objects and events.
- The following figure illustrates the cognitive process of learning.

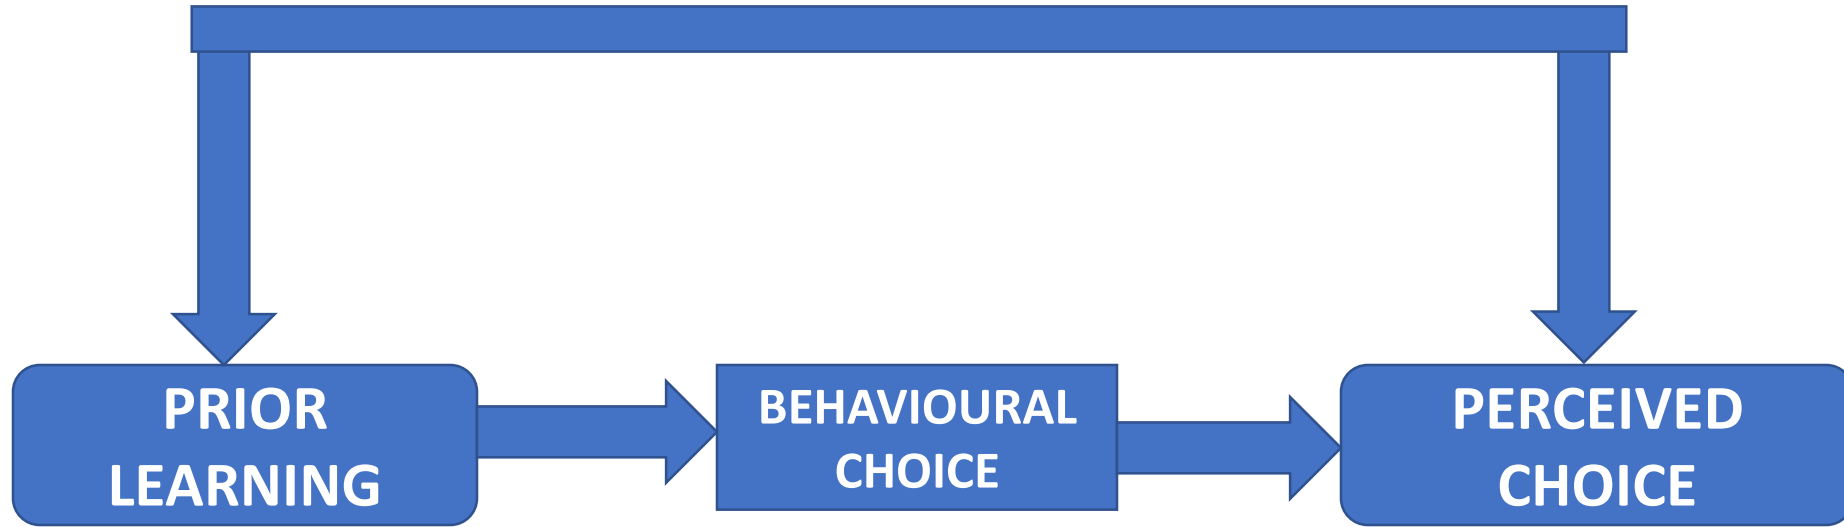

FIGURE: COGNITIVE PROCESS OF LEARNING

THEORIES OF LEARNING...

- **First**, according to cognitive theory of learning, employees use their experiences and prior learning as a basis for present behaviour.
- These experiences represent presumed knowledge/cognitions.
- For example, an employee faced with a choice of job assignment will use previous experiences in deciding which assignment he has to accept.
- **Second**, employees make choices about their behaviour.
- The employee identifies alternatives and chooses one.

THEORIES OF LEARNING...

- **Third**, employees recognise the consequences of their choices.
- Thus, when the employee finds the job assignments rewarding , he will recognise that the choice was a good one.
- **Finally**, employees evaluate those consequences and add them to prior learning, which affects future choices.
- Faced with the same job choices next year, the employee very likely will choose the same one.

THEORIES OF LEARNING...

- The cognitive theory of learning is relevant in the managerial practices.
- Many theories on motivation are also based on the cognitive theory of learning .
- Expectations, attribution/acknowledgement, and locus of control are all cognitive concepts which are required for motivating employees.

THEORIES OF LEARNING...

4)SOCIAL LEARNING THEORY:

- Social learning is also called **observational learning**.
- Social learning theory emphasises the ability of an individual to learn by observing others, i.e., models.
- The important models are parents, teachers, peers, motion pictures, TV artists, bosses and others.
- An individual acquires new knowledge by observing what happens to his model.
- This is known as **vicarious learning**.

THEORIES OF LEARNING...

- **First**, the learner must pay attention to the model- the greater the attention, the more effective the learning will be.
- **Second**, the observer must have good retention of the model's behaviour.
- Remembering helps to develop a verbal description or mental image of someone's actions in order to remember them.
- **Third**, observer must practise model's behaviour.
- Unless, the learner is capable of doing exactly what the model does, he will not be able to learn from observing the model. The model may be peer, teacher or parent.

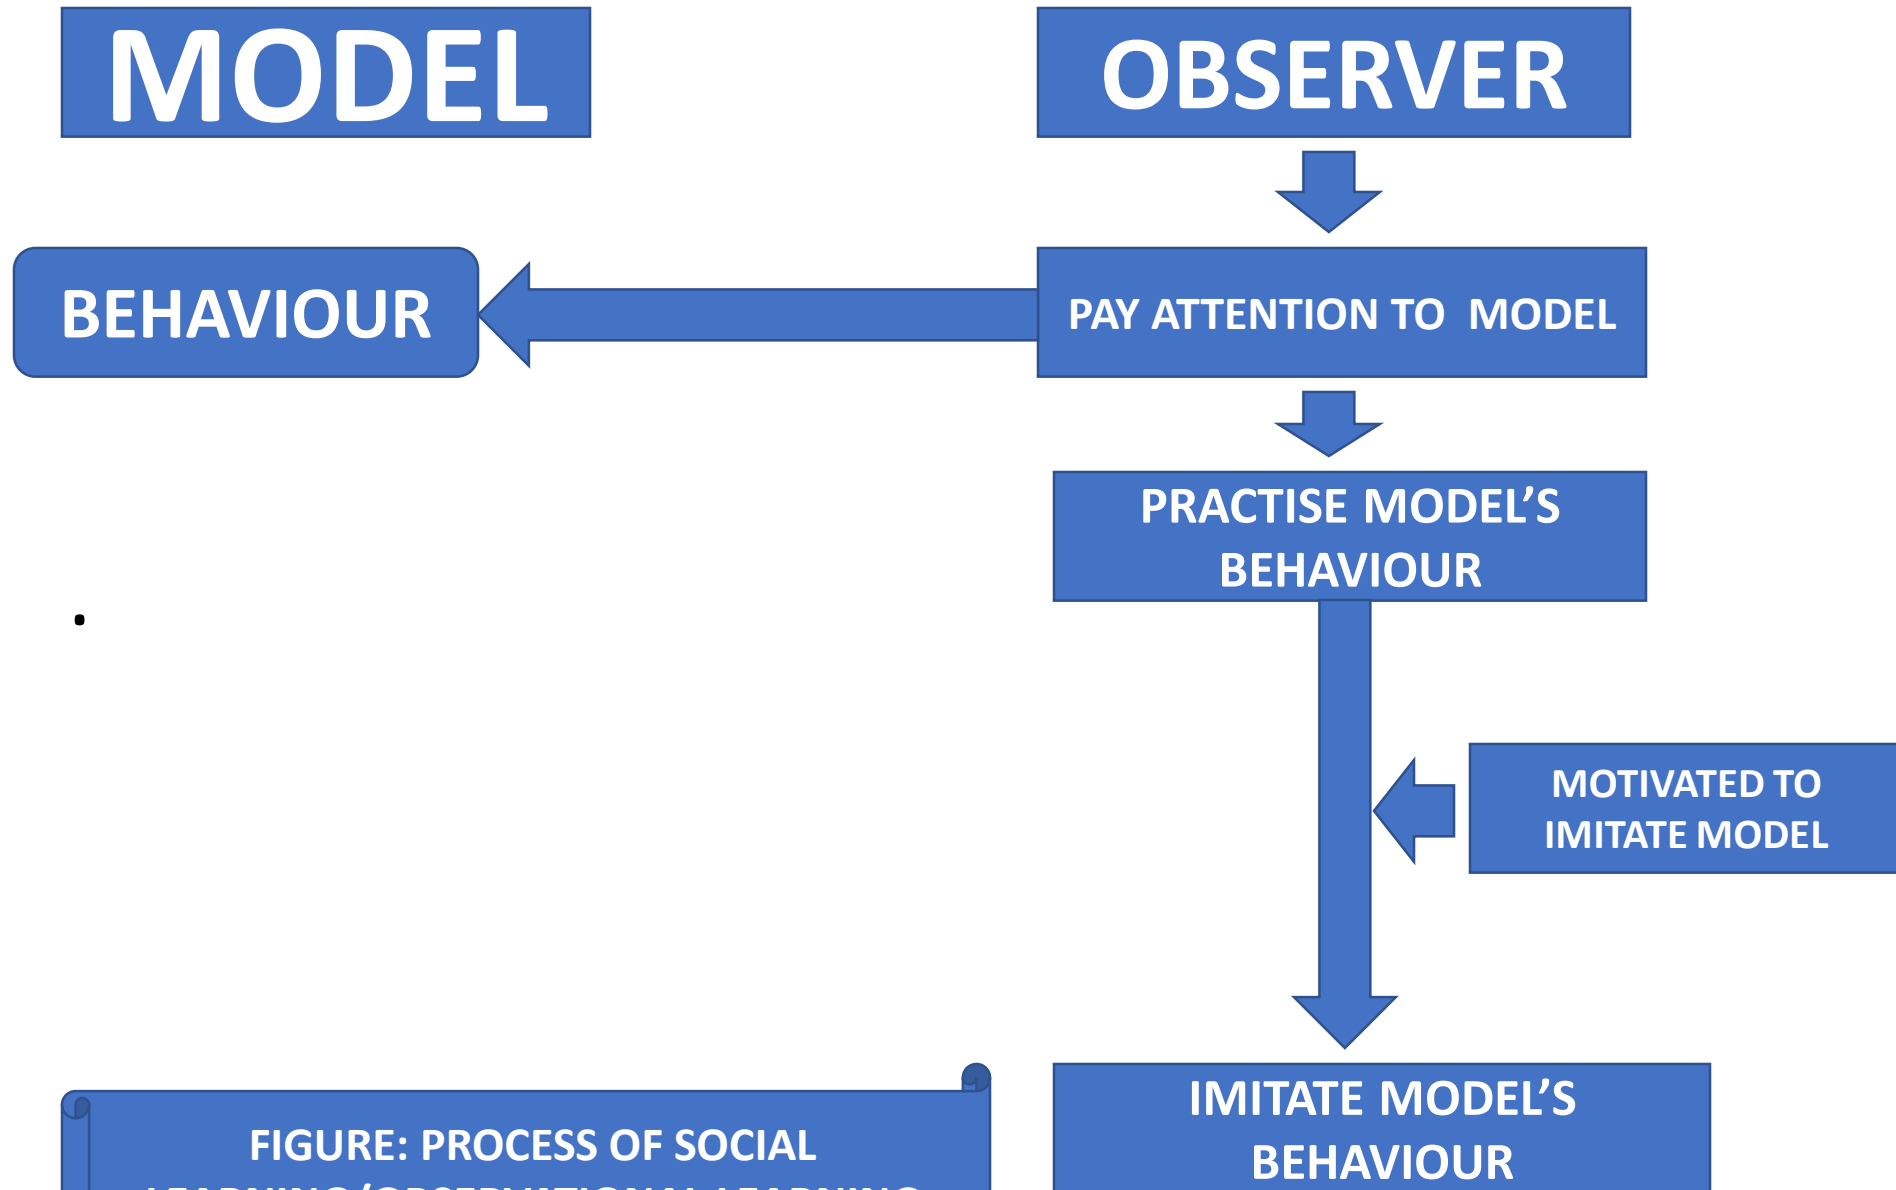

THEORIES OF LEARNING...

- **Finally**, the observer must have some motivation to learn from the model.
- One does not imitate every behaviour he sees, but focuses on that he has reason to match - such as, an action for which the model is rewarded.
- Social learning has considerable relevance in organisational behaviour.
- What is learned about how to behave is the result of the process of observational learning/social learning.

THEORIES OF LEARNING...

- A new employee acquires job skills by observing what an experienced employee does.
- Observational learning also occurs in a very informal manner.
- Observational learning is also valuable because it enhances the self-efficacy of the learner.
- Self-efficacy refers to a person's belief that he has the ability, motivation and situational eventuality to complete a task successfully.
- People strong in self-efficacy have a 'can do' attitude towards a task with other challenges in life.

Several processes of social learning are shown in the following figure.

**FIGURE: PROCESS OF SOCIAL
LEARNING/OBSERVATIONAL LEARNING**

APPLICATIONS OF LEARNING IN ORGANISATION

- Some specific organisational applications of learning are discussed below:
 - i) REDUCE ABSENTEEISM
 - ii) WELL PAY VERSUS SICK PAY
 - iii) PREVENT EMPLOYEES' INDISCIPLINE
 - iv) SELF MANAGEMENT
 - v) TRAINING
 - vi) MOTIVATION

APPLICATIONS OF LEARNING IN ORGANISATION...

i)REDUCE ABSENTEEISM:

- Learning has great application in controlling employees who normally remain absent.
- When an employee remains absent in the organisation without prior intimation, it negatively affects the development of the organisation.
- As a result of which the productivity is negatively affected.
- Therefore, to reduce absentees, the organisation should follow lottery system, i.e., the employee will be rewarded who has maximum attendance record.
- If this system is followed, then the poor attendance gradually reduced and they will participate in the lottery system.

APPLICATIONS OF LEARNING IN ORGANISATION...

ii)WELL PAY VERSUS SICK PAY:

- Another application of learning is well pay versus sick pay.
- Sometimes, the employees in the organisation ask leave just by submitting false application which hampers the performance of the organisation.
- This can be checked or eradicated by providing appropriate measures in the form of good pay package and other facilities.
- When this system is followed, then no one will ask for leave by furnishing false statement.

APPLICATIONS OF LEARNING IN ORGANISATION...

iii) PREVENT EMPLOYEES' INDISCIPLINE:

- Employees' indiscipline is a widespread phenomena in each and every organisation.
- This refers to a situation, when an employee becomes late comer, then stealing of organisational property, instigating employees in the form of strike.
- When this type of activities are occurred in the organisation, then the sustained growth of the organisation is negatively affected.
- In order to control this situation, the indisciplined employee will be asked for explanation.

APPLICATIONS OF LEARNING IN ORGANISATION...

- For example, the employee will be cautioned not to involve himself in any such activities which goes against the organisational development.
- This includes temporary suspension from the service, issuing other legal procedure and withholding the promotion.

iv)SELF MANAGEMENT:

- In this case, the employee should not raise complains against the small issue.
- He should be capable to solve the matter at his own disposal without bringing to the notice of the higher authority.
- Therefore, it is said that self management is the best management.

v) TRAINING:

- Learning is the major goal of employee training.
- Many organisations devote vast resources to training and development to expand the skills and abilities of their employees.

APPLICATIONS OF LEARNING IN ORGANISATION...

vi)MOTIVATION:

- Motivation is related to learning in several ways .
- The extent to which rewards follow high performance will affect an employee's willingness to work hard in the future.
- The cause and effect linkage between performance and reward needs to be clear.
- That is, employees should recognise that certain behaviours (such as hard work) cause certain outcomes (desired rewards).
- Similarly, if rewards do not follow performance, the employees may be less inclined to work hard in the future.

PERSONALITY

Meaning of Personality:

- The term 'Personality' has been derived from Latin word 'Personare' which means 'to speak through'.
- Personality refers to the sum total of internal and external traits of an individual, which are relatively stable and which make the individual different from others.
- Personality signifies the role which an individual displays to others.
- Personality of an individual is unique, personal and a major determinant of his behaviour.

PERSONALITY...

- Because of differences in personality, individuals differ in their manner of responding to different situations.
- Personality plays a vital role for the life of every individual.
- It is an integral part starting from birth to death.

DEFINITIONS:

- **Stephen P. Robbins** defines personality as, “the sum total of ways in which an individual reacts to and interacts with others.”
- According to **Schiffman** and **Kanuk**, “Personality can be defined as those inner psychological characteristics that both determine and reflect how a person responds to his/her environment.”

CHARACTERISTICS OF PERSONALITY:

Personality has some basic nature which are described below.

- I. Personality is psychological in nature.
- II. Personality has both internal and external elements.

Internal elements are thoughts, values and genetic traits.

The external traits are the observable behaviour what we notice, for example, sociability.

CHARACTERISTICS OF PERSONALITY...

- III. An individual's personality is relatively stable. If it changes at all, it is only after a very long time or as the result of painful events.
- IV. An individual's personality is both inherited as well as shaped by the environment.
- V. Each individual is unique in behaviour. There are remarkable differences among individuals.
- VI. Personality may be changed.

Although personality tends to be consistent and permanent, it may be changed under certain circumstances.

For example, an individual's personality may be altered by major life events, such as birth of a child, the death of a loved ones, a divorce, or a major career promotion.

DETERMINANTS OF PERSONALITY:

- The determinants of personality can be grouped as follows:

- i) HEREDITY
- ii) ENVIRONMENT
- iii) FAMILY
- iv) SOCIALISATION PROCESS
- v) SITUATION

DETERMINANTS OF PERSONALITY...

i)HEREDITY:

- It has some role in the development of personality.
- Heredity means the transmission of characteristics from forefather to present generations through gene which is located in chromosomes.
- It is said that at conception, each parent normally contributes 23 chromosomes.
- These chromosomes contain thousands of genes, which seem to be the transmitters of traits.

DETERMINANTS OF PERSONALITY...

- Physical stature, facial attractiveness, sex, temperament, muscle composition and energy level are the characteristics which are imported from one's parents.
- It is known that an individual's external appearance affect his personality.
- We normally give higher weightage to factors like height, weight, colour, facial features, etc. of an individual while defining his personality.
- For example, a good physical appearance as an asset for the post of public relation officer.

DETERMINANTS OF PERSONALITY...

ii) ENVIRONMENT:

- Environment also affects individual's personality .
- Here, environment refers to the culture of the family.
- For example, the individual's behaviour is affected by his family culture.
- If the family culture is well, then the individual will have good personality and vice-versa under normal situation.

DETERMINANTS OF PERSONALITY...

iii) FAMILY:

- The family has considerable influence on personality development of an individual, particularly in the early stages.
- For example, children raised in orphanage are much more socially and emotionally maladjusted than their counterparts raised by parents in a warm, loving and stimulating environment.
- Parents have more effects on the personality development of their children as compared to other members of the family.
- Besides parents, brothers and sisters also influence shaping of personality.
- Elders serve as models for younger.

DETERMINANTS OF PERSONALITY...

iv) SOCIALISATION PROCESS:

- The continuous impact of different social groups is called socialisation process.
- Socialisation process also affects the personality of an individual.
- This process starts with the initial contact between a mother and her infant.
- After infancy, other members of the immediate family, followed by social groups (peers, social friends and members of the working group) play influential role in shaping the personality of an individual.

DETERMINANTS OF PERSONALITY...

v) SITUATION:

- The personality of an individual changes depending on the situation.
- For example, the same person while facing an employment interview and while enjoying picnic with his friends in a public park behaves quite differently depending on two different situations.
- Situations exercise important pressure on the individual to behave in a particular manner.
- For example, the personality history of a worker suggests that a worker had need for power and achievement.

DETERMINANTS OF PERSONALITY...

- But, when the same worker is placed in a highly bureaucratised work situation, may feel frustrated and behave violently.
- A worker appears to be lazy or a troublemaker but he was a very hard worker, which indicates that his personality has been changed under changed situation.

From this it is clear that personality is a complex concept and it is influenced by many factors. -

THEORIES OF PERSONALITY

- More light on the nature of personality has been thrown by Theories of personality.
- There are several theories but the more prominent among them are:
 - 1) TYPE THEORIES,
 - 2) TRAIT THEORY,
 - 3) PSYCHOANALYTIC THEORY,
 - 4) SOCIAL LEARNING THEORY and
 - 5) HUMANISTIC THEORY

PERSONALITY STRUCTURE 'or' BIG FIVE PERSONALITY TRAITS

- Personality is composed of external traits.
- Two individuals do not possess identical traits.
- All the personality traits have been reduced to following five dimensions which are known as '**Big Five Personality Traits**'.

THE BIG FIVE PERSONALITY TRAITS...

i) EXTROVERSION:

- Extroversion reflects a person's comfort level with relationships.
- Extroverts are sociable, talkative, confident, and open to establishing new relationships.
- Introverts are not sociable, less talkative, not confident and reluctant to begin relationship.

THE BIG FIVE PERSONALITY TRAITS...

ii) AGREEABLENESS:

- Agreeableness refers to a person's ability to get along with others.
- Highly agreeable people value harmony more than they value their say.
- They are cooperative and people also trust them.
- People who score low on agreeableness focus more on their own needs than the needs of others.

THE BIG FIVE PERSONALITY TRAITS...

iii) CONSCIENTIOUSNESS:

- Conscientiousness refers to the number of goals that a person focuses on.
- A highly conscientious person focuses on relatively few goals at one time.
- He is likely to be organised, systematic, careful, thorough, responsible, self-disciplined, and achievement-oriented.
- A person with a low conscientious nature tends to focus on a higher number of goals at one time.
- Consequently, the individual is more disorganised, careless, irresponsible, not thorough and less self-disciplined.

THE BIG FIVE PERSONALITY TRAITS...

iv)EMOTIONAL STABILITY:

- Emotional stability focuses on an individual's ability to cope with stress.
- The individual with positive emotional stability tends to be calm, enthusiastic and confident.
- A person with low emotional stability tends to be nervous, depressed, and lacking confidence.

v)OPENNESS:

- Openness addresses one's range of interests.
- Extremely open people are fascinated by novelty and innovation.

THE BIG FIVE PERSONALITY TRAITS...

- They are willing to listen to new ideas and to change their own ideas, beliefs, and attitudes in response to new information.
- On the other hand, people, with low levels of openness, will be less receptive to new ideas and less willing to change their minds.
- Such people have fewer and narrow interests and be less curious and creative.

The 'Big Five Personality Traits' attract the attention of both researchers and managers. Also these are valid predictors of certain behaviours in certain situations.

PERSONALITY...

SUCCESSFUL MANAGER

PERSONALITY-THE BIG PICTURE

- Personality is one of the variables determining individual behaviour.
- Personality is made up of several traits, as many as 17,953.
- But one trait relevant to task performance is conscientiousness - a tendency to show self-discipline, to strive for competence and achievement.
- The higher the individuals are on this dimension, the higher is their performance.

PERSONALITY...

- The 'Big Five' personality traits help to assess the potential of an individual to become a leader.
- People scoring high in extroversion, agreeableness and openness are more likely to become leaders than those who score low on these dimensions.
- Moods of people fluctuate rapidly.
- Sometimes moods are up and some times they are low.
- These fluctuating moods are important dimensions of personality.
- Such differences in moods are related to the ways in which individuals approach many events and experiences on the jobs and in private life.
- Specifically, people with high moods tend to make better decisions, and perform better than people with low moods.

PERSONALITY TRAITS INFLUENCING OB 'or' OTHER PERSONALITY TRAITS

- There are different personality traits but the more important ones for Organisational Behaviour are discussed below:

i)AUTHORITARIANISM:

- Authoritarianism has been developed by the psychologist Adorno during World War-II.

PERSONALITY TRAITS INFLUENCING OB...

- People having authoritarian personality are of following characteristics:
 - They believe in formal authority.
 - They feel obedience to authority is a necessity.
 - They exhibit a negative philosophy of people.
 - They are intellectually rigid.
 - They oppose the use of subjective feelings.
 - They have strong direction towards conformity to rules and regulations.
 - They prefer a stable and structured work environment.
 - They prefer autocratic leadership.
 - They pay high respect to the individual who is in the position of authority.

ii) LOCUS OF CONTROL:

- It is defined as the degree to which people believe that they are the masters of their own fate.
- It can be described as the extent to which he believes that he knows everything.
- There are two types of locus of control:
 - Internal Locus of Control and
 - External Locus of Control.
- **Internal locus of control** implies that the degree to which an individual controls himself without other's assistance.
- In this case, individual believes that he controls his destiny.

PERSONALITY TRAITS INFLUENCING O B...

- Here, the individual believes that his behaviour determines many of the events in his life.
- Individual with moderately strong internal locus of control is successful in his job, career and lives.
- He performs his job better, copes better in stressful situation and is satisfied with challenging job and performance based rewards.
- On the other hand, **External locus of control** is defined as the degree to which an individual is controlled by the help of other people.
- In this case, individual believes that his life is controlled by outside forces.

PERSONALITY TRAITS INFLUENCING O B...

- Here, he believes that what happens to him is due to his luck.
- Individual with moderately strong external locus of control may not be successful in his job, career and life.
- Out of these two, internal locus of control is preferred more.

iii)MACHIAVELLIANISM:

- Machiavellianism is named after Niccolo Machiavelli.
- In 16th century he wrote about how to manipulate and gain powers.

PERSONALITY TRAITS INFLUENCING OB...

- Machiavellianism refers to an individual's propensity to manipulate people for solving his interest.
- An individual high in Machiavellianism will be cool, logical and assessing the system around him.
- He tries to control people, events and situations by manipulating the system to his advantage.
- He is good for jobs that need bargaining skills and commissioned sales.

PERSONALITY TRAITS INFLUENCING OB...

iv) **INTROVERSION & EXTROVERSION:**

- These are the most common descriptions of personality traits.
- Extroverts are sociable individuals while introverts are shy, quiet and retiring.
- Extroverts are suitable for position that require considerable interaction with others whereas introverts do extremely well at tasks that require thought and analytical skills.
- Managerial positions are dominated by extroverts.

PERSONALITY TRAITS INFLUENCING OB...

v) **ACHIEVEMENT ORIENTATION:**

- This trait can be used to predict certain behaviour.
- Employees with a high need for achievement, continually strive to do things better.
- They want to overcome obstacles.
- They know that their success or failure is due to their own actions.
- They like tasks which are a little bit difficult.
- An easy task does not have any challenges for which high achievers do not like it.

PERSONALITY TRAITS INFLUENCING OB...

- Similarly, a task with high risk is not liked by these people as the failure rates are more.
- High achievers like to take up tasks where out come can be directly attributed to their efforts.
- High achievers look for challenges having approximately a 50-50 chance of success.

vi)SELF ESTEEM:

- Self-esteem refers to the feeling of like or dislike of oneself.
- Self-esteem is directly related to the desire for success.
- People with high self-esteem believe that they have abilities to undertake challenging jobs.
- They choose unconventional jobs than those with people of lower esteem.
- People with high self esteem are more satisfied with their jobs than the people with low self esteem.

PERSONALITY TRAITS INFLUENCING OB...

vii)RISK TAKING:

- People differ in their willingness to take risks.
- High risk-taking managers make more rapid decisions and use less information in making their choices than that of low risk taking managers.

viii)SELF-MONITORING:

- Self monitoring refers to an individual's ability to adjust his behaviour to external situations.
- High self monitors show greater adaptability to adjust themselves with external situations than the low self monitors.
- High self monitors behave differently in different situations.
- High self monitors are likely to be more successful managers than low self monitors. Because the managers have to play multiple roles.

PERSONALITY TRAITS INFLUENCING OB...

ix)TYPE-A & TYPE-B PERSONALITIES:

- This indicates that the aggressive involvement in the organisational process to achieve more and more objectives.
- That means the Type-A personality is based on active participation towards the organisational system.
- This type of personality is treated as positive personality.
- The behaviour of Type-A personality are:
 - Hard working
 - Highly competitive
 - Always moving, walking rapidly, talking and eating rapidly.
 - Does two things at the same time
 - Measures success with quantity
 - Highly aggressive
 - Always under time pressure

PERSONALITY TRAITS INFLUENCING OB...

- **Type-B personality** indicates the individual who is relaxed and incompetent.
- He is not serious about the objective of organisation to a great extent.
- He rarely participates in an endless growing series of events in a decreasing amount of time.
- The behaviours of Type-B personality are:
 - Not concerned about time
 - Plays for fun not to win
 - Relaxes without responsibility
 - Has no pressing deadlines.
 - Can reach higher position and promotion.
 - Love to socialise and be in the company of both known and unknown people.

PERSONALITY TRAITS INFLUENCING OB...

- Most successful sales persons have Type-A personality and senior executives usually belong to Type-B personality.
- People with Type-B personality climb to the top of the organisation.

— — —

PERSONALITY & OB

i) Understanding personalities is important because personality affects behaviour.

People with similar personality types tend to get along well at work, while opposites do not.

ii) Personality profiles are used to categorise people. Personality is a means of predicting job performance.

iii) The concept of personality is not to be understood in an organisational context only. The need for understanding human characteristics is more significant.
